1. Version History

1.0 - 11-07-02 - First version, Added all Gameshark Codes for every item in every slot, total of 12,240 codes.

1.1 - 12-05-02 - Second version, Added all CodeBreaker Codes for every item in every slot, another 12,240 codes. Fixed a GameShark Code.

2.0 - 07-22-04 (1:30 am) - Third version, Major overhaul. Revised Gameshark Codes, Added Action Replay v3 codes. Added ASCII Art.

2. Introduction

On July 2nd, 2002, I took it upon myself to hack an item modifier. Of course, I completely forgot about the encryption. On July 16th, I decided to continue my project. I began encrypting all the items for slot 1. On July 21st, I finished all 48 slots of codes, 12,240 in all. On July 31st, I discovered the work done by one KReonis. Upon conversing with him, I found that my codes were not complete, that they needed an extra line to tell the game what type of item they are. My progress is documented on GScentral's message board.

So you missed an important or rare item and can't go back? Well, with an Interact GameShark, you can add any item in the game to your inventory! If you don't know what a GameShark is, or how to use one, this FAQ is not for you.

3. Gameshark v1/Action Replay v2 Codes

To check your version, go into the options screen, it says it somewhere there...

A word of warning: Be careful with these codes, they overwrite whatever you currently have in the slot. Also, do not use more than one code for each slot.

All codes are two lines! Use one of the following codes with each respective code!

4. Action Replay v3+ Codes

To check your version, go into the options screen, it says it somewhere there...

Unfortunately I long since sold my cartridge, so I can't test these. If anyone has problems with them let me know the exact version number.

A word of warning: Be careful with these codes, they overwrite whatever you currently have in the slot. Also, do not use more than one code for each slot.

All codes are two lines! Use one of the following codes with each respective code!

5. CodeBreaker v1 Codes

To check your version I believe you need to press Start+R+A at the same time during boot. Its some button combo anyways...

A word of warning: Be careful with these codes, they overwrite whatever you currently have in the slot. Also, do not use more than one code for each slot.

All codes are two lines! Use one of the following codes with each respective code!

Weapon

5. Coming Soon

Now I really think I'm finished, I actually got around to converting to AR v3 format.

6. Contributors

A special thanks to:

KReonis (Kurt Reonis) for explaining to me the different bytes that the items are made of, and hacking the three codes that determine what type of item it is.
